

How to charge the Dynamic Perception Portable 2700 mAh Battery Pack

Submitted by andre on Fri, 01/11/2013 - 20:44

[1]

We get a lot of questions from our customers about how to charge the [Dynamic Perception 2700 mAh Portable Battery Pack](#) [2]. The Portable Power 2700mAh Lithium Ion Battery Pack provides enough juice to run your Stage Zero Dolly for about 10 hours, while being small/light enough to fit in your pocket! Comes with everything you need to start using it with the Stage Zero or MX2, no additional parts required.

The manual of the battery is not clear about how to charge the battery and that is the reason why we wrote this short blog entry. Charging the battery is not difficult as long as you put the battery ON when you charge it. This is not something that you see with other batteries and this is probably why some people have "difficulties" with it.

The light on the charger will turn red when the battery is not full and when you turn on the switch. The light on the charger is green when you connect the battery without turning on the on/off switch. The red light on the charger is indicating that the battery is charging. The light on the charger will turn green when charging is finished. So, please turn ON the on/off switch on the battery when you charge it and you will be fine.

[3]

The light on the charger will turn red when you put the battery on. This indicates that the battery is charging.

[4]

Here you see that the battery is fully charged; the light on the charger is green. Note that the battery is on which is necessary when you want to charge the battery.
