

RamperPro firmware 3071 is available - Bardenas Reales release

Submitted by andre on Sun, 12/17/2017 - 20:45

[1]

We made it. Just before the end of this year. Here is a new exciting firmware release for the RamperPro time lapse controller. This release is available for all models of the RamperPro.

Change log

- Fixed an issue where a scene could get too bright after sunset. This was mostly the case in unclouded situations. The software that makes sure that the overall exposure (auto brightness) is even during the shoot has been completely rewritten.
- Added support for the new Nikon D850.
- Added support for the Nikon D500
- Added support for the Canon 80D
- Fixed an issue for the Nikon 5D

This looks like a minor release. But we are extremely excited about the new automatic exposure control feature. The exposure of a sunset/sunrise ramp stays very even during the entire shoot, regardless of the shooting conditions.
